Summary

Environmental policy for AnVa Polytech AB and AnVa Polytech UAB

Content

1	Environmental Policy	1
2	Other	2

1 Environmental Policy

Environmental consideration is an integrated part of our business plan process and permeates our daily activities. Our ambition is to actively contribute to the transformation towards a more sustainable future.

Our business consists of developing, producing, and selling injection moulded products in polymer materials. By choosing materials and processes, we help our customers achieve and exceed their environmental goals.

Our main objectives are to reduce GHG-emissions to a minimum, be energy efficient and always use renewable energy.

We will carry on an efficient environmental process and continuous improvements of the environmental actions with the goal to exceed the environmental requirements of laws and regulations.

We will cooperate with suppliers that protect the environment. Together, we will develop and replace raw materials, inputs, production equipment, and logistics solutions to reduce the total environmental impact.

We will, with a scientific approach, establish targets and action plans to reduce significant environmental impacts that are indirectly or directly caused by our business.

The commitment of all employees is a crucial success factor in all reforming processes, and the company is therefore actively working to involve and engage everyone in the environmental actions.

Mathias Larsson, CEO
